Barriers to ANHE diabetic women

No patient information available

No syringes available

No ebm storage instructions available to patients

No syringe storage bags available for patients

Not all clinical staff believe benefits of ANHE outweigh the risks of the unknown effects

Wards too busy to store correctly

Hospital storage guideline not reliably followed

Woman's negative feelings to body and breastfeeding

Unknown if patients can store ebm correctly at home

Midwife not aware of ANHE guideline

Patients and staff not confident in ANHE

Time constraints with clinic, no time to discuss

ANHE process not easy for midwives to follow

Woman hasn't heard of hand expressing
